

FOR IMMEDIATE RELEASE

Pharmaceutical products: a new era is open to protect almost every individual pill against counterfeiting

Vevey, Switzerland - Weinburg, Austria – Oct 10, 2005, AlpVision SA and Constantia Flexible Packaging today announced they have successfully integrated the Cryptoglyph anti counterfeiting technology to the blister foils packaging production line. This opens a new era to protect almost every individual pill if maintained in its individual blister pocket.

Protecting pharmaceutical products against counterfeiting is becoming more and more necessary, due to the trade globalization and the huge potential of losses which are behind the fraudulent dissemination of counterfeited pharmaceutical products. According to the International Federation of Pharmaceutical Manufacturers Associations (IFPMA), 7% of all drugs being sold around the world are already counterfeits. The value of this trade is more than 30 billion US Dollars, not to mention the dramatic health consequences in using poor quality or wrong dosage of the active ingredient.

“Constantia Flexible Packaging is a leading producer of blister foils for international pharmaceutical companies. It was amazing to see a standard rotogravure printing line produce protected blister foils” said Thomas Ullrich, Project Manager R&D. “The rapid and seamless integration of the Cryptoglyph technology with our standard blister foils production line was a very important factor, as no modification of the packaging design was necessary. The invisibility of Cryptoglyph will add a dramatic improvement to help authenticating pharmaceutical products” continued Thomas Ullrich,

AlpVision, experts in the field of digital security printing and data security, is proud to contribute to protect and identify fraudulent business with a technology which can be easily and straightforward integrated with existing production lines.

Cryptoglyph is the only technology in the world that enables to print an invisible mark with a visible ink. It is an invisible digital security feature that can be printed with standard printing equipment and seamlessly integrated into the packaging process. Today, millions of products are protected with Cryptoglyph throughout the world.

Samples of Cryptoglyph packaging products are exhibited at TechnoPharm 2005, Nuremberg, Oct. 11-13, at the Theme Pavilion “Packaging”.
